EDUCATION

Delhi Technological University

Delhi, India

B.Tech in Computer Engineering

August 2019 - June 2023

- **CGPA:** 8.73 / 10
- **Relevant Coursework:** Operating Systems, Database Management Systems, Algorithm Design and Analysis, Object Oriented Design, Data Structures, Computer Networks, System Design, ML and AI

EXPERIENCE

Wells Fargo

Hyderabad, Telangana

Senior Software Engineer

Jan 2026 - Current

- Developed a **real-time microservices suite for Intelligent document utility services** leveraging LLMs, agentic workflows and open-source models to achieve **>95% accuracy in PII redaction and Data Sanitization**.
- Implemented specialized in-house AI micro-services for use-cases such as Named entity recognition, Non-linear table extraction, Synthetic data replacement, Barcode detection, etc.
- Engineered multi-agent orchestration platform providing framework to unlock automation opportunities for **complex, previously manual use-cases** generating **10+ new projects**.
- Developed an enterprise-grade **Document Exception Management system** using React.js, .NET and Python Microservices to provide document data validation and **Human-in-the-loop functionalities** for IDP workflows. Leveraged **RedHat OpenShift** to build a resilient, scalable service architecture, maintaining 99.9% availability for document workflows.

Wells Fargo

Hyderabad, Telangana

Software Engineer

July 2023 - Dec 2025

- Worked with various business departments, **gathering business requirements and leading federated teams** on implementation of **Intelligent Document Processing (IDP) workflows** such as separation, classification and intelligent extraction capabilities to reduce manual efforts by **85%** and increase financial document processing throughput by **300%-500%**.
- Delivered **\$3.5M+ in annual operational cost savings** by optimizing document OCR pipelines, custom entity extraction, and open-source model routing for high-volume enterprise data.
- **Explored and evaluated various emerging cognitive technologies** to be introduced in the organization, including capabilities such as **Azure, Google Cloud Platform (Vertex AI and Doc AI), LLM models, RedHat OpenShift (OCP), GitHub copilot** for increasing the development efficiency and technical capabilities of the organization.

Fractal Analytics

Remote

Engineering Intern

June 2022 - August 2022

- Engineering internship consisted of various works rounding around Data analysis, Data science and Business analytics.
- Handled real-time Client Advertisement and POS sales data and created long term Regression models for predicting contribution of various sales factors in upcoming future and generating important useful insights based on the predictions

PUBLICATIONS

Publication in IEEE

- Topic - Using Discussion Thread Context in Sentiment Analysis for Improving Cyberbullying Detection **#10270005**

TECHNICAL SKILLS

AI architecture and orchestration: Agentic AI workflows, LangChain, LangGraph, MCP, RAG pipelines, Prompt engineering, NLP, Document OCR

Back-end Frameworks: Fast-API, Flask, Django, .NET (Core/Framework), Node.js, Express.js, Typescript, Javascript (ES6+), SQL (MySQL, MS-SQL server), PostgreSQL Python .NET (Core/Framework), JavaScript (ES6+), TypeScript, C/C++, HTML5, CSS3, SQL

Front-end Frameworks: React.js, Next.js, Vite (React), HTML5, CSS3

Cloud & DevOps: GCP (Vertex Ai and Doc AI), Azure Cognitive Services, RedHat OpenShift (OCP), Docker, Kubernetes, GitHub Actions, Jenkins, Harness

Core Concepts: System Design, Intelligent Document Processing, Technical Communication, Stakeholder Management, Document understanding pipelines
