Summary

Senior Software Engineer specializing in Intelligent Document Processing, Financial Data Analysis, and Agentic AI workflows. Having deep understanding of Financial document analysis and processing using Gen AI solutions. Experienced in converting Business requirements related to Financial and Non-Financial documents into Production-grade Automated Document Pipelines and Transformation Platforms. Skilled in building intelligent applications with deep knowledge of LLMs, RAG pipelines, Python, .NET, React.Js, Docker, Kubernetes and Google Cloud Platform to create reliable and scalable applications.

Work Experience

Senior Software Engineer *@ Wells Fargo* Jan 2026 – Present

Sensitive Data Protection Platform

- Architected Sensitive Data Protection platform using GCP DLP, Agentic workflows and Document manipulation modules to Identify and Replace Sensitive Data present in documents.
- Supports detection of Sensitive data and PII data belonging to various fields such as Financial, Medical, Corporate, etc. Also supports Replacement of Sensitive data present in documents to generate non-sensitive documents.
- Orchestrated using ASP.NET to serve use-case based SDP pipelines. Follows Microservices architecture deployed on RedHat Openshift for Scalable and reliable operation.

Agentic Document Classification & Extraction Pipelines

- Architected configuration-driven Classification and Extraction pipelines with Python agent services, LLMs, and GCP Document AI parsers.
- Serves various use-cases utilizing combination of GCP parsers, Agentic document-parsing pipelines and specialized RAG pipelines to achieve more than 90% avg. accuracy for Financial Document classification and extraction.
- Created a Generic Classification pipeline to classify all types of documents present across whole organization, utilized by repository team to automate document ingestion in organisation's managed repository.
- Established a reusable automation foundation for new projects, extending document intelligence to use cases previously handled manually.

Human-in-the-Loop Document Validation

- Developed a React.js based Document verification and validation platform with Authentication, Role-based queues, and Audit trails for verification of document classification and extraction results.
- Used by business users and operators as the Document Exception management platform for verification of document processing jobs, based on business requirements.
- Added features such as document splitting, merging, page-level editing, and metadata update to resolve exceptions within IDP workflows before passing data to downsream platforms.

Software Engineer *@ Wells Fargo* Jul 2023 – Dec 2025

Financial Document Processing projects

- Gathered requirements from business departments and led federated teams through the delivery of financial-document IDP workflows.
- Implemented document separation, classification, and intelligent extraction to automate high-volume end to end processing of financial documents.
- Reduced manual effort by **approximately 85%** and increased document-processing throughput by **300–500%**.

OCR Optimization & Cost Reduction

- Optimized OCR pipelines for high-volume enterprise documents, improving the economics of document processing pipelines.
- Developed Custom entity extraction and routing to open-source models as part of the processing pipeline.
- Delivered **$3.5M+ in annual operational savings** through the combined OCR, extraction, and model-routing improvements.

Engineering Intern *@ Fractal Analytics, Remote* Jun 2022 – Aug 2022

Advertising & Sales Forecasting

- Analyzed client advertising and point-of-sale data to understand historical business drivers.
- Built long-term regression models to estimate the future contribution of different sales factors.
- Translated model forecasts into business analytics insights for planning decisions.

Technical Skills

Tech Stack	Gen AI, Deep learning, Intelligent Document Processing, Agentic AI workflows, MCP, RAG Pipelines, Prompt engineering, NLP, document OCR
Languages & Backend	Python, .NET (Core/Framework), Node.js, Express.js, JavaScript (ES6+), TypeScript, C/C++, SQL
Frameworks & Databases	TensorFlow, LangChain, LangGraph, FastAPI, Chroma, React.js, Next.js, Vite (React), MySQL, MS SQL Server, PostgreSQL
Cloud & DevOps	GCP (Vertex AI, Document AI, DLP), Azure Cognitive Services, Red Hat OpenShift, Docker, Kubernetes, GitHub Actions, Jenkins, Harness
Core Skills	System design, Document Understanding, Technical communication, Stakeholder management
